Science For Sale In The Autism Wars: Medically Necessary Autism Treatment, The Court Battle For Health Insurance And Why Health Technology Academics Are Enemy Number One

Synopsis

Science for Sale in the Autism Wars is the real-world story of a landmark legal battle between children with autism versus government and their academic mercenaries. This book is a front row seat to the difficult struggle to provide children with health care insurance for their medically necessary autism treatment. The leading autism treatment attorney in the U.S., Gary Mayerson, says this about Science for Sale in the Autism Wars: "Science for Sale in the Autism Wars is a story crying out to be told. Dr. Sabrina Freeman ... expertly describes in her direct, no-holds-barred fashion precisely how health technology science was hijacked and distorted by British Columbia government ministries and their supporters, all in an effort to deprive children with autism of a "medically necessary" autism intervention. She exposes how and why government functionaries placed in charge of protecting children with autism have breached the public trust. Dr. Freeman, a skilled and articulate advocate, performs the investigatory equivalent of an autopsy wielding a razor-sharp scalpel. With the reported incidence of autism clearly on the rise, Dr. Freeman's analysis of the Auton case has profound implications for a whole generation of young children (and their families) very much at risk. The story behind the now famous Auton court case—a case that the government lost at the Supreme Court level as well as on appeal to the British Columbia Court of Appeal, presents a pitched battle that has been waged for centuries. As Dr. Freeman explains, the Auton case turned into a case essentially pitting science against pseudoscience or non-science. Dr. Freeman sends a powerful message about the search for truth, and how that search is being distorted and corrupted by handsomely compensated health technology scientists who are allowing their integrity to be compromised." Gary Mayerson is founder of Mayerson & Associates, a law practice in Manhattan dedicated almost exclusively to the representation of children and adolescents diagnosed with autism spectrum disorders.

Customer Reviews

Parents of children who are affected by autism spectrum disorders are well aware of the need to serve as effective advocates for the rights of their children. Imagine the battle that needs to be waged when an entire government fights to withhold funding for the only empirically validated intervention for autism, applied behavior analysis (ABA). Freeman describes the events that occur when a lawsuit is brought about by a group of parents against the government of British Columbia. The lawsuit argues for funding for "Lovaas-style" ABA therapy. In an attempt to block the funding of ABA therapy, the government of British Columbia attempts to discredit Lovaas and ABA through a combination of distortions, selective reporting of the research literature, and questionable ethical practices. In part one, Freeman outlines the specific strategies used against the parents' lawsuit while explaining why the government of B.C. is outright incorrect in its assertions against ABA and Lovaas. In the second part of the book, Freeman provides dialogue between the lawyers and witnesses (from actual court records) that depict these arguments and counter-arguments. Happily, the British Columbia Supreme Court ruled in favor of the parents by declaring that early intensive behavioral intervention (EIBI) is a "medically necessary" treatment for autism and that the B.C. government was in violation of the constitutional rights of the children by not providing funding for this treatment. The court also ruled that the case against Lovaas therapy was biased. Unfortunately, the book concludes by pointing out that the government of B.C. appealed the court's ruling and has still not implemented the funding of Lovaas-style ABA.
