# Molecules That Amaze Us

## Synopsis

"This new book is by two knowledgeable and expert popularizers of chemistry and deals exclusively with molecules and compounds rather than with the simpler atoms and elements. It is based on the very successful *Molecule of the Month*™ website that was begun by Paul May fifteen years ago and to which his co-author Simon Cotton has been a frequent contributor. The authors strike an excellent balance between introducing the novice to the world of molecules while also keeping the expert chemist interested. I highly recommend this book to all readers. It will vastly expand your knowledge and horizons of chemistry and the human ingenuity that surrounds it." •From the Foreword by Dr. Eric Scerri, UCLA, Los Angeles, website: [www.ericscerri.com](http://www.ericscerri.com), Author of *The Periodic Table, Its Story and Its Significance*™ and several other books on the elements and the periodic table. The world is composed of molecules. Some are synthetic while many others are products of nature. *Molecules That Amaze Us* presents the stories behind many of the most famous and infamous molecules that make up our modern world. Examples include the molecule responsible for the spicy heat in chilies (capsaicin), the world's first synthetic painkiller (aspirin), the pigment responsible for the color of autumn leaves (carotene), the explosive in dynamite (nitroglycerine), the antimalarial drug (quinine), the drug known as "speed" (methamphetamine), and many others. Other molecules discussed include caffeine, adrenaline, cholesterol, cocaine, digitalis, dopamine, glucose, insulin, methane, nicotine, oxytocin, penicillin, carbon dioxide, limonene, and testosterone. In all, the book includes 67 sections, each describing a different molecule, what it does, how it is made, and why it is so interesting. Written by experts in the field, the book is accessible and easy to read. It includes amusing anecdotes, historical curiosities, and entertaining facts about each molecule, thereby balancing educational content with entertainment. The book is heavily illustrated with relevant photographs, images, and cartoons—the aim being both to educate and entertain.

## Book Information

Paperback: 742 pages

Publisher: CRC Press; 1 edition (October 23, 2014)

Language: English

ISBN-10: 1466589604

ISBN-13: 978-1466589605

Product Dimensions: 6.1 x 1.2 x 9.1 inches

Shipping Weight: 2.8 pounds (View shipping rates and policies)

Average Customer Review: 5.0 out of 5 stars [See all reviews](#) (1 customer review)

Best Sellers Rank: #1,502,695 in Books (See Top 100 in Books) #100 in [Books > Humor & Entertainment > Humor > Science & Scientists](#) #279 in [Books > Science & Math > Chemistry > Inorganic](#) #1120 in [Books > Science & Math > Chemistry > Organic](#)

## Customer Reviews

I was given the paperback book for a birthday present and how I wish it had been around during my school days. In fact, if either of the writers had been my chemistry teacher, I might even have passed chemistry instead of being a doleful failure! It explains things so well and makes them easily understandable with humour and easy, flowing, language. Nothing dry here, with plenty of diagrams and photographs to illustrate the points: seriously, have you ever seen a photo of Sid Vicious in a science book before? And I swear I'll never look at ice cream in the same way again. It's definitely something to dip into - but you won't be able to put your Kindle down once you start! Just one more molecule...
