World Radio TV Handbook 2010: The Directory Of Global Broadcasting

Synopsis

This is the most comprehensive guide to MW, SW, and FM broadcasts and broadcasters available today - fully updated for 2010. This is the ultimate volume for anyone with an interest in radio - from searching out hard-to-find foreign broadcasts to discovering all your local stations. Completely revised and updated, this new edition is the most accurate guide to national and international SW, MW, and FM broadcasting available. "The World Radio TV Handbook" is divided into a number of sections covering numerous topics, from National Radio - which looks at the world's domestic radio services, listed by country and including contact details to International Radio - featuring full details of all broadcasters transmitting internationally; and from Television Broadcasts - which details the world's main national broadcasters and large regional networks to frequency lists of all MW and international and domestic SW broadcasts. Also included in this revised edition is a reference section that contains listings of international and domestic transmitter sites, standard time and frequency transmissions, DX Club information, as well as other essential print and electronic resources.

Book Information

Product Dimensions: 5.8 x 1.1 x 8.9 inches

Shipping Weight: 1.6 pounds

Average Customer Review: 4.4 out of 5 stars [See all reviews](#) (54 customer reviews)

Best Sellers Rank: #2,143,915 in Books (See Top 100 in Books) #88 in [Books > Humor & Entertainment > Radio > Reference](#) #426 in [Books > Humor & Entertainment > Television > Reference](#) #736 in [Books > Crafts, Hobbies & Home > Crafts & Hobbies > Radio Operation](#)

Customer Reviews

Are you new to SW-- shortwave listening? Want a hint as to what's on 15250 kHz at 2300 GMT / UTC? Where and when can one find broadcasts in English or Spanish, French, or German? The World Radio TV Handbook, WRTH 2010 has all that information and more. I began listening to shortwave in 1964 and had no idea of how to find the BBC or any other international broadcaster. I

had some hints from a friend's dad who was a HAM or amateur radio operator. A small paperback AARL introduction to ham radio had more information on how to make a radio and aerial and pass an exam or code and theory than information on SWL. Eventually I was lucky enough to pick up programs from Radio Nederland and HCJB just about how to listen to SWL and tips for DX or distance listening. I heard also about WRTH. It was 1974 when I found and bought my first copy of WRTH. It opened me to so much information. For a listener, here is how I use WRTH. First section is articles about all aspects of radio from broadcasting to receiver reviews to maps, where to listen bands, and which bands are better to listen to at a particular time of day. The 2nd section is an alpha list of domestic governmental and commercial broadcasters by country. This is where I find US and Canada AM stations. A 3rd section is specific to international broadcasting--those broadcasts specific to an foreign audience. For example, RCI, Radio Canada International has e-mail, web address, fax & phone, leading personnel, and what kind of QSL (like a broadcasting post-card with your name and details confirmed of your report). (Yes some people do collect these. My first QSL was from Radio Nederland Happy Station). A 4th section is TV which I just scan over.

Here's an indispensable book every DXer should have beside one's rig. It's the World Radio TV Handbook (WRTH) 2011. I've thumbed through this voluminous publication over the past month or so, and I have discovered this almanac-like book contains a wealth of radio and TV information, which while probably available on the Internet after much searching is readily available in this one easy-to-search resource. So, what's in the book? Quite a lot, actually. At over 600 pages, the book is indexed into different sections and categories. In this issue, there are articles about propagation, QSL cards, low-cost portable radios made in China and much more. Sections on Radio and TV stations around the world take up two-thirds of the book, and it is here the DXer will find this resource most helpful. With this book I have flipped through the Medium Wave Radio section for Asia and quickly identified stations in my region of the world. Most of the stations here are located in towns around Thailand and Indonesia. Even if the Medium Wave band is of no interest to you, it identifies every known station in North and South America, Europe and elsewhere. The station's call letters, transmitter size and broadcast times are all duly noted. The international short-wave broadcasters are listed in a similar manner. Again, it has been immensely helpful in quickly tracking down much-wanted information on any given station. In my case, it is usually the need to confirm postal and email addresses which, I might add, are generally 99% accurate. Along with this, it lists seasonal frequencies and times of all known short-wave stations, and again it is almost always correct.
