Customer Reviews

Not only is this tome THE book of the year -- if not the decade -- for Star Wars enthusiasts (such as myself), but it will also go down well with biologists (such as myself). Extremely well thought out, the authors draw parallels with animals found on Earth to make the creatures of the Star Wars universe realistically believable. For example, the size relation of the nuna's egg to the adult female is also found in the kiwi, and the multiple embryos coming from that single egg are similar to the multi-spawning eggs of some parasitic wasps. The similarities between banthas and elephants are copious, and the mouth-breeding behaviour of the opee sea killer will be familiar to any avid aquarist. There are also many wonderful and enchanting "background" details in many of the drawings, like Bib Fortuna looking to purchase a Nightsister's rancor, an Ewok being carried off by a condor-dragon, and some Tatooine anoobas picking over the remains of the late podracer Teemto Pagalies (those are DEFINITELY his goggles). The book is arranged in chapters by planet. (Naboo has three chapters for its various macroenvironments: terrestrial, deep aquatic, and swamp.) The ecologies of the worlds and the niches of the native creatures are all highly detailed and superbly

explained. Great care and effort was put into expanding the range of Star Wars wildlife knowledge, using conceptual sketches and some apparently original animals to flesh out the bestiary to a fantastic extent. The images of the creatures themselves are -- and I have NEVER before used this term outside of describing food before, but it is now necessary -- sumptuous. The people responsible for the content of this book deserve to win awards. Lots of 'em.
